Miele laundry care appliances

Welcome to Miele

IMMER BESSER (Forever Better) – our pledge

When our two great grandfathers founded the Miele company, they had to make sure they stood apart from the competition in order to be successful. There are effectively only two ways of doing this: either by being cheaper than the rest or by being better than the rest. It is not really possible to be both at the same time.

They decided to be "better" than the rest.

Numerous best in class awards and certificates attest to the fact that Miele has continued to renew its commitment to being "Immer Besser" (Forever Better) throughout the past 115 years. However, the millions of satisfied customers around the world are perhaps the most important endorsement.

At the heart of this success lies a continuity of values and goals which are typically only found in companies which have been familyrun for generations, rather than in businesses which are guided by the often short-term interests of the stock market.

It is in this sense that Miele has embodied first-class product quality and German engineering since 1899. Miele also stands in equal measure for respect, fairness and mutual esteem towards sales partners, customers, suppliers, employees and neighbours. Buying a Miele is an environmentally friendly decision. We ensure this by using methods of production that save resources as well as by producing products which set new standards in terms of their consumption of electricity, water and detergent - and save you money at the same time.*

As directors and co-proprietors of the fourth generation of our business we promise you that this will not change.

IMMER BESSER (Forever Better)

Our pledge

There are many good reasons for choosing Miele. Here are just six of them. Since the company was founded in 1899, Miele has remained true to its "Immer besser" brand promise. This means that we will do all that we can to be forever better than our competitors and forever better than we already are. For our customers this means the peace of mind of knowing that choosing Miele is a good decision – and probably the decision of a lifetime!

Quality - made by Miele

For more than 100 years it has been a proven adage that you can trust Miele and rely on our appliances. We are the only manufacturer in our branch of industry to test products such as our washing machines, tumble dryers, dishwashers and ovens to the equivalent of 20 years' use. Once a Miele, always a Miele: Miele customers around the world remain loyal to Miele and recommend Miele to others. Looking to the future, we promise not to entertain any compromises when it comes to the dependability and durability of our appliances.

Miele technology

Miele stands for excellent results combined with the lowest possible energy consumption. This applies to the hygienic and gentle care of your laundry, your flooring and your crockery as well as when conjuring up exquisite culinary delights. The key to this is a wealth of innovative features available only from Miele. This is borne out by numerous first places in leading product tests conducted around the world.

Miele convenience

Whether conventional rotary switch, discreet sensor controls or a high-resolution touch display like the one on your smartphone: operating a Miele is both easy and fun. Add to this a multitude of convenient and reliable automatic programmes and a great love of detail - success is guaranteed – on board both laundry and kitchen appliances. Make life easier for yourself with Miele.

Miele design

Miele believes in clean lines and timeless elegance. Nowhere else will you find such a comparable range of built-in kitchen appliances, with consistency in design lines and colour options, to suit the most diverse of interior designs and kitchen furniture fronts. Great care is taken to coordinate appliance design across the range. Whatever the style of your kitchen: Miele is the perfect match.

Miele service

Miele customers enjoy preferential treatment: The quality of our customer service is reviewed regularly with the help of Miele customer surveys; in addition, it is verified through tests by independent institutes. This applies to our products as well as our technical service.

Miele brand

In many countries Miele is the most coveted brand in its branch of industry. In its German home market, Miele was even voted 'best brand ever' across all product branches. And the ownership of products from such a brand reveals much about its users: Miele customers have high expectations for the performance and the environmental friendliness of their domestic appliances. People who buy Miele are quality conscious and have style.

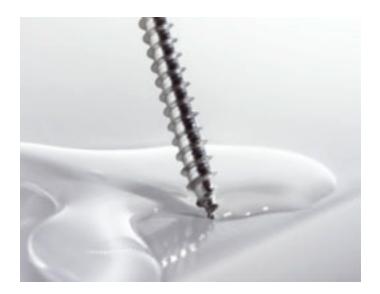

Highest levels of product quality, perfect and outstanding results – and extremely efficient at the same time. The highest demands on production and the materials used underline Miele's brand promise: Immer besser (Forever Better).

Tested for the equivalent of 20 years' use

Miele carries out intensive endurance tests during the development phase in order to meet the highest quality standards. In these tests the appliances (e.g. washing machines) are expected to wash for 10,000 hours. This involves running a mix of approximately 5,000 wash programmes. This corresponds to approx. 5 programmes per week with an average cycle time of two hours – over 20 years.

Quality - made by Miele

Enamelled front

Miele enamels the front panels of all washing machines, tumble dryers, and washer-dryers. The high-quality enamel is scratch-proof, corrosion-proof, alkaline-resistant, impervious to acids, easy to clean and colour-fast.

Stainless-steel suds container

The suds container is particularly robust and hygienic. It is supported by shock absorbers and four suspension springs, and is weighed down with cast-iron counterweights. This is Miele perfection for minimum wear and tear, excellent sound-proofing qualities, and durability.

Bearing cross and counterweights made of cast iron High-quality materials and manufacturing ensure less wear and tear and excellent stability in all Miele washing machines and tumble dryers.

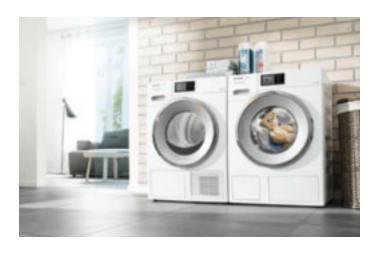

Maintenance-free heat exchanger

In Miele heat-pump dryers, the heat exchanger is protected by an effective filtration system and does not require cleaning. This ensures constant low energy consumption – a whole appliance life long.

This is only available from Miele

Perfect systematic laundry care

Our laundry-care system covers the entire process, from washing and drying to ironing. Even the special cleaning products from Miele were developed in our own laboratories and have been perfectly formulated to match Miele appliances.

The ideal combination

Miele washing machines and tumble dryers match each other perfectly. As a result, you can find a matching tumble dryer for every washing machine with respect to design and features. This enables us to offer you best cleaning and care performance combined with gentle laundry care.

Perfect laundry finish

Many textiles only get a perfect finish when they are ironed and given additional protection through mechanical and thermal treatment. You can iron particularly easily, conveniently, quickly and effectively using the Miele FashionMaster steam ironing system and Miele rotary ironers.

Results are simply perfect

Not all off-the-shelf products deliver the same results on all washing machines. For this reason, we have developed Miele detergents in our own laboratories in collaboration with selected suppliers. The formulas are perfectly adapted to Miele washing machines and tumble dryers. This allows you to tap the potential of your Miele machines to the full and reduce the burden on the environment at the same time.

What type of appliance would you like?

Here are the available product types which you can choose from when deciding on a washing machine and tumble dryer.

Miele washing machine models

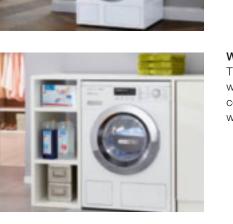

Front-loading washing machines

These washing machines are particularly convenient to load, unload and operate at the front. Thanks to the many different installation options (stacked, built-under, etc.), these appliances can be positioned in most spaces.

Washer-dryers

This appliance combines a high-quality well-equipped front-loading machine with a condenser dryer. Ideal for discerning people with little available space.

The tumble drying systems from Miele

Heat-pump dryers

Miele's particularly energy-efficient heatpump dryers offer the same convenience and flexibility as conventional condenser dryers but use up to 50% less energy.

Condenser dryers

Condenser dryers give you the option to install your appliance anywhere you want as the only connection required is a mains socket. Instead of ducting the moistureladen air to atmosphere, condenser dryers cool it down in a closed air circuit causing the moisture to condense.

How would you like your appliance to be installed?

Here are installation options to make it easier for you to choose the right combination of washing machine and tumble dryer.

Washer and dryer stack

If there is not sufficient space available to install two appliances next to one another, most Miele washing machines and tumble dryers can be conveniently combined as a washer-dryer stack. In this arrangement, the washing machine is always installed under the tumble dryer.

The WhiteEdition appliances are ideal for stacking. The door hinge on the tumble dryers can be changed so that the doors of both appliances open in the same direction. Miele offers various stacking kits for a stable connection between the two appliances. Some, e.g. the WTV 512 model, feature a practical drawer. This drawer is ideal for storing accessories for example or for conveniently resting the laundry basket on whilst loading and unloading the tumble dryer.

For further information on this topic go to the chapter on accessories for laundry care machines on page 94.

Side by side

Technically and optically, Miele washing machines and tumble dryers match each other perfectly. This allows you to install both appliances side by side and transfer freshly washed textiles conveniently to the tumble dryer. ChromeEdition models with slanted fascia panels offer ergonomic advantages. The WTS 510 plinth (optional accessory) offers practical storage space below the appliance – and a convenient working height.

Slot-in

All Miele front-loading machines slot in under a worktop with a minimum niche height of 85 cm. This installation option does not require the appliance lid to be removed. W1 ChromeEdition machines with straight fascia panel as well as W1 WhiteEdition machines are particularly suitable for this type of installation

Built-under

Miele ChromeEdition appliances with straight fascia can even be installed under a worktop if the maximum installation height below the worktop is 82 to 85 cm. In such cases, the appliance lid is replaced with a building-under kit (e.g. UBS W1/G or UBS T1/G).

The two design lines

At Miele, you do not have to decide between best technology and the most attractive design. The model category and model features are available in two design lines: ChromeEdition and WhiteEdition.

ChromeEdition

Classic appliance design, depending on model with round chromeplated door ring and viewing window on washing machines and tumble dryers. Optionally with straight or ergonomically slanted fascia.

WhiteEdition

Fresh appliance design for laundry care: depending on mode,I with round designer door in white or alu silver and viewing window on washing machines and tumble dryers. Fascia with chrome accents.

Which user interface do you prefer?

Individual user interfaces

The most suitable Miele for you

The innovative user interfaces of Miele washing machines and tumble dryers are logically and intuitively structured: a convenient rotary selector for wash programmes or drying programmes, clearly and concisely arranged switches for additional functions. A logical operating sequence from right to left: switch appliance on – select programme and options – press start button. Some models feature a high-resolution TFT display.

Which eco features would you like your appliance to have? Efficiency and sustainability

The responsibility for our environment has long been a tradition at Miele for more than 110 years. Our natural environment is the foundation of our existence which we want to protect, This begins with the selection of materials, ensuring efficient production and ends, after a long machine life, in environmentally friendly recycling.

Economical and environmentally friendly washing

Miele engineers invest their time and energy in finding ways to save energy. All W1 washing machine models effortlessly achieve A+++, the highest energy efficiency rating. The most efficient models consume even 40% less energy than is required (46) for Energy Efficiency Rating A+++.

With the new Miele washing machines you save electricity and water like never before. But you cannot economise on perfect cleanliness.

Economical and environmentally friendly drying

Over the last 15 years Miele - as a pioneer in laundry care - has reduced electricity consumption of its tumble dryers by 60%. As all tumble dryers from the new T1 tumble dryer generation feature energy efficient heat-pump technology they already achieve at least an A++ energy efficiency rating.

Miele laundry care appliances

Discover the new dimension for perfect cleanliness!

Miele TwinDos The best liquid detergent system

Automatic dispensing

TwinDos¹⁾

to Miele Fabric type, quantity of laundry and degree of soiling – all this must be taken into consideration when dispensing the correct amount of detergent. This sounds pretty complicated. That is why Miele is taking this off your hands.

With the TwinDos function two detergent containers can be integrated into the washing machine, and the appliance dispenses the optimum quantity of detergent for the laundry to be washed at the touch of a button.

For best results use UltraPhase 1 and 2, Miele's unique 2-Phase detergent system. TwinDos dispenses both components at the correct point in time during the wash cycle. This ensures the thorough cleaning of your laundry, and radiant coloured and white textiles.

And should you wish to use a different detergent such as powder? No problem! Simply dispense the powder via the detergent dispenser drawer.

30% detergent savings²⁾

By the way, such accurate dispensing is difficult to accomplish manually. This is also certified by the ecological institute Öko Institute e.V. in Freiburg, Germany, which confirms a 30% detergent saving potential thanks to the automatic dispensing feature from Miele.

¹⁾ Patent: EP 2 784 205

²⁾ According to Öko-Institut e. V. report dd. 06.09.2013: 'Potential savings with automatic TwinDos dispensing on washing machines'

Miele UltraPhase 1 and 2

The best liquid dispensing system

AUTOMATIC 2-PHASE DOSING SYSTEM

- Stain removal
 Degree of whiteness
- · Degree or v

FEST NO: HL 13.2.10991

- Anti-greying
- Dosing accuracy

Competence in Textiles · Worldwide

The endorsed properties for the automatic 2-phase dosing system using Miele UltraPhase 1 and UltraPhase 2 detergents were compared with branded liquid detergents at different temperatures.

At 40°C the stain removal was tested against a colour care detergent, and at 60°C the stain removal, degree of whiteness and anti-greying properties were tested against a heavy-duty detergent.

The dosing accuracy was confirmed regardless of the washing temperature.

www.hohenstein.com

Exclusive to Miele Best liquid detergent system on the market!

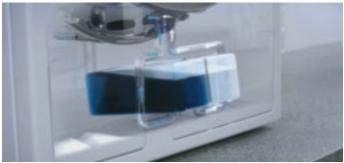

The German Hohenstein test institute tested the automatic 2-Phase dispensing system in connection with Miele's UltraPhase 1 and UltraPhase 2 detergents. They confirmed excellent wash results in terms of stain removal, the degree of whiteness, the anti-greying effect and accuracy of dispensing.

No other liquid detergent washes whites as well as coloureds as thoroughly as the 2-Phase-System from Miele. That is because conventional liquid detergents do not contain any bleach as it would damage the other ingredients. But bleach is necessary to remove stubborn stains (coffee, tea, fruit juice, red wine).

UltraPhase 1 and 2 are stored and dispensed separately which makes it possible to add bleach to the TwinDos system. Active ingredients in UltraPhase 1 break up the soil and remove stains such as oil, grease, protein and starch stains.

With UltraPhase 2, bleach is added at the appropriate time during the wash process and removes even stubborn stains such as coffee, tea, fruit juice or red wine.

WT1 with PowerWash 2.0

Cleaning performance: 10% better

Future technology for pure cleanliness and efficiency

Innovative ideas are needed for the future that benefit not only us but the environment too. With PowerWash 2.0 Miele revolutionises washing - for the benefit of all. PowerWash 2.0 achieves a cleaning performance and an energy efficiency at a speed which has never been achieved before in laundry care. Never before has it been possible to wash so effectively and economically at the same time. Achieving more with less - that is innovation made by Miele.

Tested performance: up to 40% faster laundry care and saving up to 25% electricity at the same time.

The outstanding energy efficiency of Miele W1 with PowerWash 2.0 is confirmed by the German Öko Institute e. V. (German ecological institute). Under everyday conditions¹) Miele's appliance washes up to 25% more economically and, depending on the selected programme, up to 40% faster than appliances from other reputable manufacturers – achieving the best cleaning results with the highest energy efficiency on the market.

Even small wash loads are washed cost-effectively. The innovative Spin&Spray wash technology ensures particularly low water levels, so saving on heating energy. At the same time all programme durations are moderate. No wash programme takes more than three hours, including the Cottons Eco energy-saving programme.

Outstanding wash performance in the shortest of times

Miele sets new standards with PowerWash 2.0. The Intensive Flow feature ensures outstanding wash performance of Miele appliances: the wash performance increases by 10%. Even the QuickPowerWash programme excels at achieving cleanliness in less than one hour.

These values^{*} have been confirmed by the highly reputable WFK Institute for Applied Research in Krefeld, Germany, which tested the performance of PowerWash System 2.0^{2} .

Top-class cleaning performance: at least 10% better than before.

Excellent wash performance in less than one hour.

Miele CapDosing The perfect addition for special applications

CapDosing¹⁾

Exclusive to Miele Would you like to achieve perfect wash results on items requiring special treatment such as woollens or outdoor clothing too - with very little effort? For this, we now offer Miele Caps. These small portioned capsules are simply placed into the fabric conditioner compartment. The Miele washing machine dispenses the contents of the Caps at the perfect point in time during the wash process - completely automatically.

Our capsule range also includes fabric conditioner with three fragrances (Aqua, Cocoon and Nature) as well as a proofing agent and a Booster to remove stubborn soil.

Which convenience features would you like? Overview of the product highlights* of Miele washing machines

TwinDos¹⁾ Exclusive to Miele

Automatic dispensing -TwinDos offers 2 options for this:

For best results use UltraPhase 1 and 2, Miele's unique 2-Phase detergent system. TwinDos dispenses both components at the correct point in time during the wash cycle. This ensures the thorough cleaning of your laundry, and radiant coloured and white textiles. With this, Miele offers the best liquid detergent system on the market.

As an alternative, TwinDos can also automatically dispense conventional liquid detergents or conditioner. Simply fill the Miele refill containers (available as optional accessories) with those products and the appliance dispenses the right quantity.

Exclusive to Miele

PowerWash 2.0 Top wash performance and speed combined with the best energy efficiency for large and small loads.

QuickPowerWash²⁾ Exclusive to Miele Fast and thorough: clean laundry in less than 1 hour

CapDosing³⁾

Dispense special detergent, fabric conditioner and additives simply by using portioned capsules.

Stains option4)

Select from 3 different types of stains: the appliance adapts the wash programme and shows tips on the display.

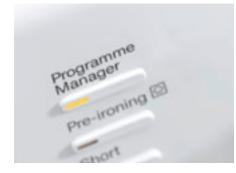

SoftSteam drum⁵⁾

Achieving perfectly treated laundry quickly: the pre-ironing function smoothes your garments before they leave the drum.

¹⁾ Patent: EP 2 784 205

- ²⁾ Tested and confirmed by wfk research institute in Germany
- 3) Patent: EP 2 365 120
- 4) Patent: EP 2 228 479 ⁵⁾ Patent: EP 2 390 399

Which additional convenience features would you like? Overview of further product benefits* of Miele washing machines

Wash Assistant Good advice at hand: the Wash Assistant advises you on the most suitable programme for your textiles.

SteamCare 50% less ironing¹⁾ – maximum variety of applications: after a wash programme or as a separate smoothing programme.

Tested for the equivalent of 20 years' use²⁾

Unique quality: Miele offers particularly long-lasting products by carrying out extensive tests.

Enamelled front As good as it looks: the enamelled front is scratch-proof, corrosion-proof, and easy to clean.

ProfiEco motor³⁾ Powerful and economical: ProfiEco motors from Miele are maintenance-free and wash your laundry quietly and economically - reliably.

Wider range of languages Your Miele appliance offers several languages: various languages can be selected via the interface.

Automatic load control Metrology à la Miele: Low load, less water and electricity consumption. Completely automatically.

EcoFeedback Consumption under control: this function gives you full control over electricity and water consumption.

Hot water

For cool customers: you can save energy with a second water connection if you use hot water from a solar-thermal installation.

Energy efficiency Absolutely exemplary: achieving excellent wash results and short cycle times with best energy efficiency class.

Exclusive to Miele AutoClean detergent dispenser – patented⁴) No detergent residue: the AutoClean detergent dispenser is rinsed with a series of powerful jets of water after every wash programme.

Delay start and countdown indicator According to schedule: programme your appliance to start at a time suitable for you – in accordance with your daily schedule.

Drum lighting

Enlightening: the perfectly lit SoftSteam honeycomb drum reliably eliminates the risk of items being left behind when unloading the machine.

Waterproof system (WPS) Double safety: in the event of a leak, a double solenoid valve stops the flow of water directly at the stopcock.

WaterControl System (WCS) Everything dry: WCS monitors the water intake, detects leakages and water in the drip tray.

- * depending on model
- ¹⁾ Confirmed by the Household Technology Department of the University of Bonn

- ³⁾ Patent: EP 2 840 679 4) Patent: EP 2 022 884

Miele washing machines and tumble dryers feature a wide range of special programmes for the targeted care of different fabrics. Washing and drying programmes are perfectly matched to produce best possible results.

Which wash programmes are important to you? Special purpose programmes* tailored to the needs of individual textiles

Curtains

Spotlessly clean: the automatic pre-wash programme removes dust and soil before the intensive wash cycle.

Dark garments Intensive colours: dark garments retain their intensive colour thanks to the gentle treatment they receive.

Delicates

Gentle and with care: synthetics remain looking good and perfectly in shape for longer when washed with this special programme.

Denim

No bleaching: this programme ensures that colours are retained without unsightly bleached areas or creases.

Down duvets Loose filling: feather- and down-filled duvets are gently washed and perfectly spun.

Down filled items Full volume: down-filled textiles such as jackets and pillows remain fluffy and stay in shape.

Exclusive to Miele Express 20¹) Quickly freshened up: lightly soiled and small laundry quantities are quickly ready for use again.

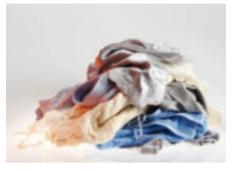

First wash Shape maintained: new textiles are cleaned gently. This treatment retains their colour and shape.

* depending on model ¹⁾ Patent: DE 10 2007 037 159

Which wash programmes are important to you? Special purpose programmes* tailored to the needs of individual textiles

Freshen up Gentle and smooth: laundry is perfectly refreshed and prepared for ironing.

Exclusive to Miele Mixed items¹⁾ Substantial savings: with this special programme, you can wash various types of textiles together.

Outerwear Best care without loss of function: highquality outdoor wear retains its functionality no matter what the weather.

Pillows Pleasantly fresh: even large pillows with synthetic filling look as good as new.

Proofing Best possible reactivation effect: a thermal fixation process ensures excellent waterproof properties.

Shirts

Prevents creasing: reduces creasing and simplifies the ironing of shirts and blouses significantly.

Silks³⁾

Excellent care: all hand-washable textiles without wool content are washed extremely gently.

Sportswear The fitness programme: sportswear is ready to wear again in next to no time.

Steam care

Reduces the need for ironing: this programme for damp, freshly washed laundry reduces the need for ironing by half. Woollens⁴⁾ No shrinking, no felting: delicate wool fabrics are handled particularly gently, maintaining their quality.

Miele washing machines

What do the icons mean? All symbols for front-loading washing machines at a glance

Charts on the following pages contain detailed information on all Miele front-loading washing machines. In general, Miele products have many different functions and characteristics.

Icons of the most important features directly above the product ensure differentiation at a glance. For a faster overview we are giving you a brief explanation of all used icons in this product group on this page.

Α

Energy efficiency Indicates the energy efficiency of the appliance.

Energy efficiency ratings A+++ to A+ are indicated.

Type of drum/load size Indicates the type of drum and drum capacity.

> SoftSteam drum¹⁾ with 1-9 kg load capacity.

Honeycomb drum with 1-8 kg load capacity. -8ka

Water protection systems Indicates the type of water protection system installed.

WPS: In the event of a leak, a double solenoid valve stops the flow of water directly at the stopcock.

WCS: monitors the water intake, detects leakages and water in the drip tray.

Dispenser system

Indicates which automatic dispensing system the machine features.

TwinDos: best wash results thanks to Miele's 2-Phase-System and convenient dispensing system.

PowerWash

States if the appliance features PowerWash 2.0 technology.

PowerWash 2.0: top wash performance and speed combined with the highest possible energy efficiency for large and small loads.

PowerWash: the new power of washing washes cleaner and faster than ever.

CapDosing²⁾

Indicates if the appliance features CapDosing.

Dispense special detergents, fabric conditioners and additives using portioned capsules.

Stains option³⁾

Indicates if the appliance features the stains option

Select from 3 different types of stains: the appliance adapts the wash programme and shows tips on the display.

Smoothing function Indicates which smoothing function is installed.

SteamCare: 50% less ironing - maximum variety of applications, after a wash programme or as a separate smoothing programme.

Pre-ironing: 50% less need for ironing - smoothing after a wash programme

Water connection

Indicates which additional water connections can be used with the appliance.

For cool customers: you can save energy with a second water connection if you use hot water from a solar-thermal installation.

* More energy-efficient than required for A+++ rating (46) ¹⁾ Patent: EP 2 390 399 2) Patent: EP 2 365 120 3) Patent: EP 2 228 479

Useful details Miele washing machine glossary

AutoClean¹⁾

The AutoClean detergent dispenser is rinsed with a series of powerful jets of water after every wash programme. This removes any detergent residue thoroughly. The particularly smooth surface assists the rinsing process.

Automatic load control

All Miele washing machines feature intelligent automatic load recognition. This feature analyses the current load and uses no more water and electricity than is necessary for perfect wash and rinse results.

CapDosing²⁾

Miele's portioned capsules are a convenient solution for processing laundry requiring special applications. They are simply placed into the fabric conditioner compartment. The appliance dispenses the contents automatically at the perfect point in time during the wash process.

Your choice: 6 special detergents (Sport, Down, Outerwear, WoolCare, SilkCare, Proofing), 3 fabric conditioners (Aqua, Nature, Cocoon), as well as the Booster which deals with persistent soiling.

Delay start and countdown indicator

The delay start feature allows you to determine when you want the next wash programme to start. This is of particular advantage if you want to use cheap-rate electricity or when you want a programme to finish when you, for example, come home from work. You can postpone the start of a programme by up to 24 hours. The display also informs you of the time the current programme will finish.

Drum lighting

Many Miele washing machines feature LED drum lighting. The maintenance-free power LEDs illuminate the Miele SoftSteam honeycomb drum so perfectly that you can no longer overlook any laundry items during unloading. Simply convenient – and looking good!

EcoFeedback

Miele washing machines with EcoFeedback function provide precise electricity and water consumption data. This gives you full control over costs. Before starting a programme, you can request the consumption forecast of a selected programme. Precise consumption data is provided after the programme has finished as consumption can vary depending on the load.

Enamelled front

Miele enamels the front panels of all washing machines, tumble dryers, and washer-dryers. The high-quality enamel is scratch-proof, corrosion-proof, alkaline-resistant, impervious to acids, easy to clean and colour-fast. This keeps machines looking as good as they did when first purchased.

Energy efficiency

Miele washing machines are ecological and consume only the amount of water and electricity needed. The most economical amongst them are even 40% more efficient than is required for the threshold value (46) of the highest A+++ energy efficiency rating.

PowerWash 2.0

PowerWash 2.0 offers highest level of cleaning performance - with the QuickPowerWash programme in less than one hour. Appliances wash up to 40%³ more economical than is required for the highest energy efficiency class, and achieve this even with moderate cycle times: no programme takes longer than three hours. Small loads, too, are washed economically. This is possible thanks to the Spin&Spray technology which works with a very low water level and saves heating energy.

ProfiEco motor4)

Experience extraordinarily powerful motors in Miele washing machines. The ProfiEco motor from Miele is also economical and quiet. As the motor is electronically controlled, it does not require carbon brushes, which makes it maintenance-free. For efficient and convenient washing for many years.

ProgrammeManager

The settings in the ProgrammeManager allow you to adapt the wash process to suit your personal requirements:

Intensive: an even better wash performance – achieved in standard programme cycle times.

ECO: particularly energy efficient without compromising wash performance

Extremely gentle: max. fabric care and reduced need for ironing Extra quiet: Low sound emissions thanks to special wash rhythm and "Rinse hold"

AllergoWash: for the requirements of those suffering from allergies

 $^{3)}$ Up to 40% more economical than the threshold value (46) for energy efficiency class A+++,

¹⁾ Patent: EP 2 022 884

²⁾ Patent: EP 2 365 120

depending on the model

QuickPowerWash⁵⁾

Excellent cleanliness in less than 1 hour – barely believable. With QuickPowerWash, Miele realises a high-level cleaning performance in a surprisingly short time.

SoftSteam drum⁶⁾

If "Pre-ironing" or "Steam smoothing" is selected, the drum is heated after the final spin cycle. This has a smoothing effect and loosens the laundry which can then be easily removed. And most importantly: this makes ironing much easier and faster.

Stains option7)

Up to 23 different types of stains can be treated in a Miele washing machine – up to three types of stains at the same time. Simply add the respective programme option – and the wash programme is adjusted accordingly to suit the specific stain. The integrated stain-removal guide in the display advises on how to tackle the stain in question efficiently. This is only available from Miele.

SteamCare⁸⁾

SteamCare from Miele smoothes your textiles gently and effectively with the assistance of steam – even before the load is removed from the washing machine! The need for ironing is verifiably reduced by up to 50%⁹. Some textiles do not require ironing at all after this treatment. With Steam smoothing, you can wash and smooth your clothing in one process. With "Steam care" you can treat already washed textiles.

TwinDos¹⁰⁾

Automatic dispensing with TwinDos is not only practical, but also guarantees perfect cleanliness: with UltraPhase 1 and 2 your appliance offers the best liquid dispensing system. TwinDos dispenses UltraPhase 1 and 2 at the optimum time during the programme and thus achieves the very best wash results. TwinDos also dispenses with such precision that you can save up to 30% on detergent when compared to manual dispensing.

Tested for the equivalent of 20 years' use

Miele carries out intensive endurance tests during the development phase in order to meet the highest quality standards. In this test the appliances are expected to wash for 10,000 hours. This involves running a mix of approximately 5,000 wash programmes. This corresponds to approx. 5 programmes per week with an average cycle time of two hours – over 20 years.

Wash Assistant

If you do not know which programme is the most suitable one for a specific textile, the Miele Wash Assistant can help: simply enter the type of textile, the colour and desired spin result – and the electronic module establishes the most suitable programme. You always achieve a perfect wash result with the Wash Assistant. Safely and certainly.

Water control system (WCS)

The water control system (WCS) monitors the water intake with a water level sensor. Water intake is automatically terminated if the normal water level is not reached within a appropriate period of time. If there is water leakage inside the machine, the inlet valve inside the appliance is closed and the water in the suds container is pumped out. A float switch in the sump also detects leaking water.

Waterproof system (WPS)

WPS also features a double solenoid valve directly at the stopcock. In the event that the first valve is defect, the second one closes the inlet. The sheathed inlet hose also ensures the highest level of safety: in the event of a defect in the inlet hose, water flows down the outer sleeve into the sump. Just as the WCS, the WPS also features intelligent sensor technology: leakages are recognised and the water intake is terminated.

Wider range of languages

Your appliance can display information and tips in several languages to ensure that you understand everything. Simply select your language from the language menue. A flag directs you. This enables you to find your way around the interface - even if a language has been selected you do not understand.

Bouncy, fragrant and virtually free of creases – that is how we dry nowadays!

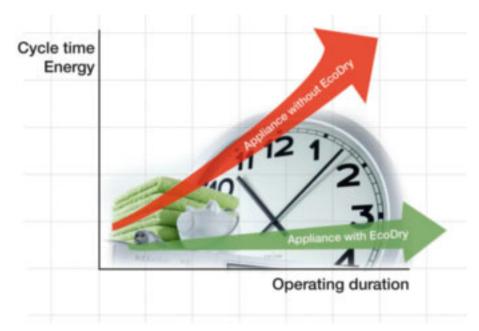

EcoDry technology Saving throughout the entire tumble dryer life cycle

Miele heat-pump dryers set standards worldwide for highest demands on quality and durability. With EcoDry technology Miele keeps energy consumption low and drying times short throughout the entire life cycle of your appliance.

EcoDry technology consists of a perfectly working filtration system and a maintenence-free heat exchanger. This system ensures that fluff does not clog up the heat exchanger. With systems without EcoDry the heat exchanger can clog up over time, which results in constantly increasing energy consumption and longer drying times throughout the life cycle of the tumble dryer.

EcoDry – Good for your laundry and your budget.

Short programme cycles, low energy consumption

Miele's EcoDry technology guarantees short drying times throughout the entire life cycle of your appliance. With systems without EcoDry, fluff collects in the heat exchanger over time. The results is less warm air inside the drum to extract moisture from the laundry. This extends the programme to achieve the desired drying results.

Longer programme durations also have an effect on the the heat pump - it has to operate for longer. This increases energy consumption and energy costs. After a certain operating time, this can lead to the energy efficiency rating on the label of the tumble dryer no longer applying.

Miele dryers with highest condensation efficiency

Reduced humidity protects you and your rooms

Miele tumble dryers are in an efficiency class of their own: especially when it comes to moisture release. Thanks to our high-performance drying technology, very little moisture is released into the room air. The majority is fed safely into the condensate drawer as condensate. That's why all Miele tumble dryers attain the highest condensation efficiency rating A and condense moisture with around 50 % greater efficiency than these regulations require. The better a tumble dryer's condensation efficiency rating, the less moisture escapes to the outside. This classification can be found next to the familiar energy efficiency class information located on the bottom left of the EU energy label on your Miele appliance.

Particularly air tight for good room air

During the drying process, Miele tumble dryers condense moisture from clothing so efficiently that only a small amount escapes into the atmosphere. The less humidity in living and utility rooms, the lower the risk of mould forming on ceilings and walls. This allows you to install your tumble dryer even in a room without windows or in low-energy houses.

Quality door seal system prevents moisture loss

The Miele tumble dryer's outstanding door seal system is a key quality factor and also the reason behind its constantly high level of efficiency. A special drum door seal ring with Kevlar® fibres guarantees optimum impermeability values. The moisture cannot escape via the door and stays inside the machine.

Optimum efficiency in the shortest possible time

Miele drying technology puts userfriendliness first. Miele tumble dryers deliver the very best results in the shortest amount of time. In doing so, however, 50%¹⁾ less moisture is released into the room air than is required for condensation efficiency rating A.

Miele is better than condensation efficiency classification A

In Miele tumble dryers the moisture from the laundry is condensed approx. 50%¹⁾ more efficiently than is required for the efficiency rating A.

This is calculated by comparing the moisture levels of the textiles before the drying process with what has later gathered in the condensate container. Below you can see the significant differences for a drying cycle with an 8 kg load:

Condensation efficiency classification B

Approx. 750 ml²⁾ of moisture is expelled to atmosphere during the drying process. This is roughly the content of three small water bottles.

When using the machine often throughout the year, the room is subjected to 150 l of condensation.³⁾ This equates to approx. one full bathtub.

Condensation efficiency classification A

For this efficiency class, not more than 500 ml²⁾ or 2 small bottles of water must be expelled to the atmosphere.

50% less than condensation efficiency classification A

Only approx. 250 ml²⁾ of moisture is expelled into atmosphere from Miele tumble dryers - roughly the content of one small water bottle.

1) Tested in Miele's own laboratories

- ²⁾ Based on 8 kg load and 60% residual moisture at the start of programme
- ³⁾ Based on 200 programmes per year with 8 kg load and 60% residual moisture at the beginning of programme

FragranceDos*

Scented laundry just the way you like it

Discover a new kind of freshness

Exclusive to Miele With your Miele tumble dryer you can now enjoy the superb convenience of a long-lasting and wellbalanced fragrance. The new Miele fragrances add your personal favourite scent to your laundry during the drying process. This results in particularly bouncy and beautifully fragrant laundry. Choose your very own personal favourite from 5 fragrances.

The fragrance flacon¹⁾ is simply fitted into a holder on the easily accessible fluff filter and distributes an unobtrusive fragrance evenly onto your laundry. The intensity of the fragrance can be adjusted by turning the flacon. For the ultimate freshness experience in every drying cycle!

Perfect drying results thanks to Exclusive to Miele mineral sensors: with this Perfect Dry system, your laundry dries perfectly - even if the water contains significant amounts of calcium. That is by no means a given with tumble dryers, because the calcium content in the water affects residual moisture measurement - and therefore also the drying result. Perfect Dry with mineral sensors takes the current calcium content of your water into account and accurately adjusts the drying process accordingly. This ensures that your laundry is not too dry or too damp. The desired degree of drying is always achieved to perfection.

Which convenience features would you like? Overview of the product highlights* of Miele tumble dryers

Exclusive to Miele

EcoDry technology

Miele EcoDry technology guarantees long-term low energy consumption and short drying times. Thanks to the effective interplay between the Miele filter system and the maintenancefree heat exchanger fluff cannot clog up the condenser unit, which can cause blockages and reduce power output over time.

With EcoDry, Miele heat-pump dryers constantly work economically - a machine life long.

FragranceDos¹⁾ Freshness for all the senses: with Miele you not only have particularly bouncy, but also beautifully fragrant laundry.

Energy efficiency Best performance with A+++: highest efficiency, producing excellent results.

Heat-pump technology

Also for delicate items: drying at low process temperatures is economical and very gentle on textiles.

Maintenance-free heat exchanger Good protection: a filter protects the heat exchanger so it does not require cleaning.

Perfect Dry

Always perfectly dried: Perfect Dry takes the mineral content of your water into account and modifies the drying process accordingly.

Which additional convenience features would you like? Overview of further product benefits* of Miele tumble dryers

Best condensation rating Best protection for your home and furniture: 50% less moisture loss than is required for a condensation efficiency rating A.

Honeycomb drum¹⁾ to Miele Fewer creases, easier ironing: the honeycomb structure allows laundry to be dried gently and evenly.

Integrated condensed water drainage²⁾ Emptying not necessary: the condensed water can be drained off via a hose directly into a sink or a siphon.

SteamFinish

A guick alternative to ironing: steam and heat smooth your textiles before they leave the tumble dryer.

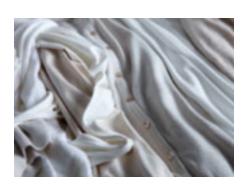

EcoFeedback Information always at a glance: energy consumption and fluff filter condition is indicated - for permanently low consumption.

Best sound emissions Drying in peace and quiet: sound emissions

as low as 62 dB thanks to reduced airflow and vibration noises.

Intelligent drum reversal For best drying results: changing the direction of drum rotation prevents laundry from tangling and creasing.

Door hinged on the right or left Always on your side: on all WhiteEdition tumble dryers you can select on which side you would like the door to be hinged.

Delay start and countdown indicator According to schedule: program your appliance to start at a time suitable for you - in accordance with your daily schedule.

Drum lighting

Nothing can be overlooked: the honeycomb drum is perfectly illuminated. No item is left behind when unloading the machine.

Exclusive
to MieleTested for the equivalent of
20 years' use3)Unique quality: Miele offers particularly
long-lasting products by carrying out
extensive tests.

Enamelled front As good as it looks: the enamelled front is scratch-proof, corrosion-proof, and easy to clean.

Drying Assistant

Sound advice at all times: the Drying Assistant guides you reliably to perfect results.

Anti-crease action Practical: the laundry is loosened frequently after the drying programme has finished and delays creasing.

Convenient fluff filter Practical: the filter is easily removed at the front and easy to clean thanks to the smooth filter surface.

Wide range of languages Your Miele appliance offers several languages: various languages can be selected via the interface.

* depending on model ¹⁾ Patent: EP 1 293 594 ²⁾ Patent pending: EP 2 532 779

³ Based on approx. 5 programmes per week with an average of 1.5 hour cycle time.

Which drying programmes are important to you? Special purpose programmes* tailored to the needs of individual textiles

Automatic plus For mixed loads: cottons and synthetics can be conveniently processed together.

Cottons hygiene Sustainable: dust mites and bacteria do not stand a chance with a special time/ temperature profile.

Delicates Takes care of synthetic fibres: synthetics remain looking good and in shape for longer when dried with this special programme.

Denim

Perfect results: protects your favourite denims from unsightly bleached stripes and creases.

Express

Sometimes things have to be done at the double: Small laundry quantities are quickly dried and ready for use again.

Extra quiet Pleasant: a special and particularly quiet programme for cottons and mixed loads.

Gentle smoothing Great smoothing effect: damp as well as dry laundry is visibly smoother.

Exclusive to Miele Mixed items Substantial savings: with this special purpose programme, you can dry various types of textiles together.

Outerwear Drying gently without loss of function: retains the functional properties of multilayered textiles with membranes.

Pillows

Loose filling: even large pillows look as good as new again – whether with feathers, down or synthetic filling.

Pre-ironing Visibly less creases: damp an dry laundry is gently smoothed.

Proofing Best possible reactivation effect: a thermal fixation process ensures excellent water-proof properties.

Shirts

Prevents creasing: reduces creasing and simplifies the ironing of shirts and blouses significantly.

Silks handcare Hardly any creasing: silk textiles are dried so gently that creasing reduces to a minimum.

Sportswear The fitness programme: sportswear is ready to wear again in next to no time.

Steam smoothing Achieving perfectly laundered textiles fast: steam and heat smooth your textiles before they leave the tumble dryer.

Woollens handcare Finish with a bounce: delicate woollen textiles are treated extremely gently which retains their value.

What do the icons mean? All symbols for tumble dryers at a glance

Information always at a glance: energy consumption and fluff filter condition is indicated - for permanently low consumption.

Smoothing function

Indicates which smoothing function is installed.

Visibly less creases: damp an dry laundry is gently smoothed.

Great smoothing effect: damp as well as dry laundry is visibly smoother.

Useful details Miele tumble dryer glossary

Anti-crease action

If you cannot remove your textiles immediately after the drying programme has finished, the anti-crease action ensures that the items are moved at regular intervals to prevent excessive creasing.

Best condensation rating

An important quality criteria for tumble dryers is that the entire unit is water tight. The less hot moisture-laden air leaking from the tumble dryer, the better the condensation effect. High evaporation losses in closed rooms are also very unpleasant: Condensation on walls can result in mould and damage to the building. Miele tumble dryers achieve best leak-proof values – and therefore the highest condensation

efficiency rating.

Best sound emissions

Casing and air circuit of Miele heat-pump dryers are designed to reduce airflow and vibration noise to a minimum. This allows you to switch on your tumble dryer at any time without disturbing noises. Selected models also feature "Extra quiet", a special programme which reduces the noise level even further when drying your laundry.

Convenient fluff filter

With Miele's intelligent fluff filter you are finally rid of inconvenient fluff. Furthermore, the fluff filter is also particularly convenient: when the "Clean out airways" reminder appears in clear text, the Miele fluff filter is simply pulled out at the front. The smooth filter surface makes cleaning pleasantly easy. Fluff filter and laundry are kept separate – for guaranteed fluff-free textiles.

Delay start and countdown indicator

The delay start feature allows the start of a programme to be postponed. This is of particular advantage if you want to use cheaprate electricity or when you want a programme to finish when you, for example, come home from work. You can postpone the start of a programme by up to 24 hours. The display also informs you of the time the current programme will finish.

Door hinged on the right or left

On Miele washing machines and tumble dryers from the WhiteEdition line, the door hinges can be relocated to suit your individual requirements perfectly. If you have a washer-dryer stack, for example, both doors open in the same direction.

Drum lighting

All Miele tumble dryers have drum lighting, many of them with maintenance-free LEDs. These illuminate the Miele honeycomb drum so perfectly that you can no longer overlook any laundry items. Simply convenient – and looking good!

Drying Assistant

If you do not know which programme is the most suitable one for drying your mountain of laundry, the Miele Drying Assistant can help. Enter the type of textile and the desired drying stage. You can also determine if you want your laundry to dry particularly quickly, gently or energy-efficiently. The electronic module automatically establishes the most suitable programme. This ensures that a perfect drying result is achieved – safely and certainly.

EcoDry technology

Miele EcoDry technology guarantees long-term low energy consumption and short drying times. Thanks to the effective interplay between the Miele filter system and the maintenance-free heat exchanger fluff cannot clog up the condenser unit, which can cause blockages and reduce power output over time. With EcoDry, Miele heat-pump dryers constantly work economically – a machine life long.

EcoFeedback

The Eco feedback function helps you to dry as economically as possible. Before the selected programme starts, you receive an energy consumption forecast. The actual consumption is displayed during and after drying. This value will vary depending on the load. This allows you, on the basis of accurate data, to protect the environment and save money. Filter saturation is also indicated. Because a clean fluff filter also saves energy!

Enamelled front

Miele enamels the front panels of all washing machines, tumble dryers, and washer-dryers. The high-quality enamel is scratch-proof, corrosion-proof, alkaline-resistant, impervious to acids, easy to clean and colour-fast. This keeps machines looking as good as they did when first purchased.

Energy efficiency

This is how environmentally friendly a tumble dryer can be: all Miele heat-pump dryers achieve at least an A++ energy efficiency rating. This saves money and you have the advantage of drying laundry with a clear conscience.

FragranceDos¹⁾

With Miele fragrance flacons – in 5 sensual variants – your laundry is enwrapped with your own personal favourite scent. A family-run company in the south of France, which has been creating perfumes since 1871, produces fragrances for Miele. Using a patented process their perfume specialists ensure that the essential oils in the perfume are preserved. The result: pleasantly fresh and natural fragranced laundry for up to four weeks.

Heat-pump technology

Above all, heat-pump tumble dryers are known for high energy efficiency. Laundry dries particularly economically. The low temperatures of the heat-pump technology are very gentle on valuable fibres of your textiles. This allows you to conveniently dry even delicate items.

Honeycomb drum²⁾

The unique honeycomb structure lifts the laundry higher in the rotating drum. Items are exposed to the warm air stream for longer, which achieves more uniform drying results. Air pockets form in the depressions of the individual hexagons and cushion the fall of laundry. This ensures that your textiles are treated much more gentle and have less creases after drying. This simplifies ironing considerably.

Integrated condensed water drainage³⁾

All Miele condenser dryers, including heat-pump dryers, feature integrated condensed water drainage with a hose tidy. As a result, you can pump out condensate into a sink or a siphon and save yourself the trouble of emptying the condensate container.

Intelligent drum reversal

A Miele tumble dryer changes the rotation of the drum in irregular intervals. This prevents laundry from rolling into a tangled knot, ensures uniform drying results and reduces creasing.

Maintenance-free heat exchanger

In Miele heat-pump dryers, the heat exchanger is protected by an effective filtration system and does not require cleaning. This ensures constant low energy consumption – a whole appliance life long.

MobileControl⁴⁾

With the MobileControl function you are fully in control of your Miele appliances, also when you are out and about – via smartphone or tablet. It allows you not only to access the programme status, but also to conveniently select and start programmes using your mobile terminal device, no matter where you are. Simply download the Miele@mobile app and connect the appliance to Miele@home. When you return home, your Miele machine has already finished its job.

Perfect Dry

Thanks to this system, your laundry dries perfectly – even if the water contains significant amounts of calcium. This is by no means the norm on machines without Perfect Dry as the calcium content in the water influences residual moisture sensing – and in turn has an impact on drying results. Perfect Dry takes the current calcium content of water into account and precisely adjusts the drying process accordingly. This ensures that the selected drying stage is always achieved.

ProfiEco motor

Experience extraordinarily powerful and highly efficient permanentmagnet motors in Miele tumble dryers. These motors are extremely economical due to improved efficiency. They are also maintenancefree – fully compliant with the life expectancy of Miele appliances.

SteamFinish

If ironing is not one of your favourite tasks, then you will appreciate Miele's SteamFinish with the Steam Smoothing programme. At the beginning of the drying process, water is sprayed into the honeycomb drum creating a fine mist which is heated by the drying air. The developing steam penetrates the textiles and visibly smoothes the laundry. This ensures that ironing is much easier and faster – or completely superfluous.

Tested for the equivalent of 20 years' use

Miele carries out intensive endurance tests during the development phase in order to meet the highest quality standards. In this test the appliances are expected to dry laundry for 7,500 hours. This involves running a mix of approximately 5,000 wash programmes. This corresponds to approx. 5 programmes per week with an average cycle time of 1.5 hours – over 20 years.

Wider range of languages

Your appliance can display information and tips in several languages to ensure that you understand everything. Select your language from the language menu. A flag directs you. This enables you to find your way around the interface - even if a language has been selected you do not understand.

¹⁾ Patent pending: EP 2 431 516 ²⁾ Patent: EP 1 293 594 ³⁾ Patent pending: EP 2 532 779

The first washer-dryer with perfect dispensing.

The new WT(1) washer-dryers

Washing and drying in one process in one and the same machine

One or two machines?

With appliances from Miele this is first of all only a question of the space available. A washer-dryer fulfils your high demands without entertaining any compromises. It offers perfect laundry care in the smallest space. A washer-dryer washes your laundry just as clean as a washing machine, and then dries it just as excellently as a condenser dryer. The key benefit: the laundry-care process is not interrupted. In the meantime you can do something you enjoy - your washer-dryer takes care of everything else.

Which washer-dryer is the one for you?

Depending where you want to install your washer-dryer and how much laundry you accumulate, Miele offers washer-dryers in various sizes and with different fascia inclines. This helps you to find the most suitable appliance for your needs.

Miele's compact washer-dryers

Compact technology, compact dimensions. With a depth of 60 cm, Miele's WT1 washerdryer can wash and dry up to 4 kg of laundry in one single process. If it only washes the laundry, it can process up to 7 kg of laundry. For this reason it is ideal for smaller households with average volumes of laundry. Two different fascia panel inclines are available for the compact WT1.

Straight fascia

The washer-dryer with straight fascia can be perfectly integrated into your kitchen. Simply slide it under a worktop that is at least 85 cm high. Alternatively, the appliance lid can be replaced using a building-under kit. The washer-dryer can then fit under an 82-cm high worktop.

Slanted fascia

If you want to have a freestanding washerdryer in your apartment or in the cellar, we recommend a machine with a slanted fascia panel. The slight incline of the panel allows you to read the display very easily.

Miele XL washer-dryers

For households with large volumes of laundry should opt for the XL model.

Slanted fascia

This larger washer-dryer with a depth of 67 cm can wash and dry up to 5 kg of laundry in one single process. If you only wash your laundry, the appliance can be loaded with up to 8 kg of textiles. The XL model is designed as a freestanding machine and has a slanted fascia panel which makes it easy for you to read the display.

Which convenience features would you like? Overview of Miele WT(1) washer-dryer product highlights*

Exclusive to Miele

TwinDos¹⁾

Automatic dispensing -TwinDos offers 2 options for this:

For best results use the unique Miele 2-Phase detergents UltraPhase 1 and 2. TwinDos dispenses these two components at the appropriate time during the wash process. This ensures the thorough cleaning of your laundry, and radiant coloured and white textiles. With this, Miele offers the best liquid detergent system on the market.

As an alternative, TwinDos can also automatically dispense conventional liquid detergents or conditioner. Simply fill the Miele refill containers (available as optional accessories) with those products and the appliance dispenses the right quantity.

QuickPower Time-saving care: laundry is perfectly washed and dried extremely fast.

PowerWash 2.0 Exclusive to Miele Top wash performance and speed combined with the highest energy efficiency for large and small loads.

CapDosing²⁾

Dispense special detergents, fabric conditioners and additives using portioned capsules.

The Miele honeycomb drum Extremely gently: thanks to the honeycomb surface structure, the laundry glides gently on a thin film of water.

SteamCare

Up to 50% less ironing: after a wash or drying programme or as a separate smoothing programme.

Depends on model

- Calculation is based on 5 wash loads per week for 28 weeks
- 1) Patent: EP 2 784 205 2) Patent: EP 2 365 12

Which laundry-care programmes are important to you? Special purpose programmes* tailored to the needs of individual textiles

Automatic

For mixed loads: cottons and synthetics can be conveniently processed together.

Cottons hygiene

Good to know: a higher water level and an extended temperature holding time reliably kill bacteria and mites.

Curtains Spotlessly clean: the automatic pre-wash programme removes dust and soil before the intensive wash cycle.

Dark garments

Intensive colours: dark garments retain their intensive colour thanks to the gentle treatment they receive.

Denim

No bleaching: this programme ensures that colours are retained without unsightly bleached areas or creases.

Down Full volume: down-filled textiles such as jackets and pillows remain fluffy and stay in shape.

Express

Quickly freshened up: lightly soiled and small laundry quantities are quickly ready for use again.

Freshen up Gentle and smooth: laundry is perfectly refreshed and prepared for ironing.

Outerwear Best care without loss of function: highquality outdoor wear retains its functionality no matter what the weather.

Pillows Pleasantly fresh: even large pillows with synthetic filling look as good as new.

Proofing Best possible reactivation effect: a thermal fixation process ensures excellent water-proof properties.

QuickPower Time-saving care: laundry is perfectly washed and dried extremely fast.

Shirts

Prevents creasing: reduces creasing and simplifies the ironing of shirts and blouses significantly.

Silks¹⁾

Excellent care: all hand-washable textiles without wool content are washed and partially dried extremely gently.

Sportswear The fitness programme: sportswear is ready to wear again in next to no time.

Steam care Reduces the need for ironing: this programme for damp, freshly washed laundry reduces the need for ironing by half.

Trainers

For champions: with this gentle special purpose programme, washable trainers are cleaned gently and effectively.

Woollens²⁾

No shrinking, no felting: delicate wool fabrics are handled particularly gently, maintaining their quality.

Useful details The glossary of Miele washer-dryers

AutoClean

The patented¹⁾ AutoClean detergent dispenser is rinsed with a series of powerful jets of water after every wash programme. This removes any detergent residue thoroughly. The particularly smooth surface assists the rinsing process. This ensures that dispenser compartments remain clean.

CapDosing²⁾

Miele's portioned capsules are a convenient solution for processing laundry requiring special applications. They are simply placed into the fabric conditioner compartment. The appliance dispenses the contents automatically at the perfect point in time during the wash process. Your choice: 6 special detergents (Sport, Down, Outdoor, WoolCare, SilkCare, Proofing), 3 fabric conditioners (Aqua, Nature, Cocoon), as well as the Booster which deals with persistent soiling.

Delay start and countdown indicator

The delay start feature allows the start of a programme to be postponed. This is of particular advantage if you want to use cheaprate electricity or when you want a programme to finish when you, for example, come home from work. You can postpone the start of a programme by up to 24 hours. The display also informs you of the time the current programme will finish.

Enamelled front

Miele enamels the front panels of all washing machines, tumble dryers, and washer-dryers. The high-quality enamel is scratch-proof, corrosion-proof, alkaline-resistant, impervious to acids, easy to clean and colour-fast. This keeps machines looking as good as they did when first purchased.

Energy efficiency

Miele washer-dryers are ecological and consume only the amount of water and electricity needed. All washer-dryers achieve an energy efficiency rating A, and a wash performance classification A.

Flowmeter

Some Miele washer-dryers feature a flow meter in addition to automatic load recognition: with a precision impeller, the water intake is controlled and measured very precisely. This helps to save water – extremely economical and environmentally friendly.

Honeycomb drum

The web-like structure of the Miele honeycomb drum allows a thin film of water to be created between the drum and the laundry. This results in laundry gliding gently and protects the fibres perfectly. The smaller, smoothly polished shouldered holes in the walls of the drum are also gentle on your textiles and prevent pilling and laddering. Foreign objects such as paper clips no longer end up in the drain pump.

Load-size indicator and dispensing recommendation

This intelligent function assists you in preventing overloading of the washer-dryer and also in dispensing the right amount of detergent. The appliance detects the current load and indicates how much more laundry can be placed in the machine. You are also given a recommendation in the display on the correct amount of detergent for the load. This allows you to always wash environmentally friendly and achieve the best results.

PowerWash 2.0

Miele washer-dryers with PowerWash 2.0 achieve best cleaning results and are extremely economical at the same time, even with small loads. The innovative Spin&Spray wash technology ensures particularly low water levels, so saving on heating energy. All programme durations are moderate as no wash programme takes longer than three hours, including the Cottons Eco energy-saving programme.

ProfiEco motor³⁾

Experience extraordinarily powerful motors in Miele washer-dryers. The ProfiEco motor from Miele is also economical and quiet. It consumes less electricity and is maintenance-free. For efficient and convenient washing and drying for many years.

ProgrammeManager

The settings in the ProgrammeManager allow you to adapt the wash and drying process to suit your personal requirements: Intensive: an even better wash performance – achieved in standard programme cycle times.

ECO: particularly energy efficient without compromising wash performance

Extremely gentle: max. fabric care and reduced need for ironing

QuickPower

The QuickPower programme guarantees best wash and drying results in the shortest of times. The combination of the economical PowerWash technology and an efficient condenser dryer washes and dries 4 kg of laundry perfectly within only 2.45 hours, and the XL model only needs 3.15 hours for 5 kg of laundry.

Rinse out fluff

Fluff remaining inside the machine after the drying cycle is completely rinsed out in this programme. Condenser channel, suds container and drum are completely lint-free within a few minutes. This safely prevents discolouring of textiles through fluff carry-over.

SoftSteam drum4)

If "Steam smoothing" is selected, the drum is heated after the final spin cycle. This has a smoothing effect and loosens the laundry which can then be easily removed. And most importantly: this makes ironing much easier and faster.

Stainless-steel suds container

The suds container is particularly robust and hygienic. It is supported by shock absorbers and four suspension springs, and is weighed down with cast-iron counterweights. This is Miele perfection for minimum wear and tear, and durability. Even at high spin speeds the appliance remains stable and safe.

Stains option

Select from a list of 7 different types of stains. The washer-dryer washes with the most suitable wash programme for this type of stain. The integrated stain-removal guide in the display advises on how to tackle the stain in question efficiently.

SteamCare

SteamCare smoothes your textiles gently and effectively with the assistance of steam. The need for ironing is verifiably reduced by up to 50%⁵⁾. Some textiles do not require ironing at all after this treatment. With Steam smoothing, you can wash and smooth your clothing in one process. With "Steam care" you smooth already washed, still damp, textiles. With "Freshen up", briefly worn but still clean items are freshened up and smoothed.

Tested for the equivalent of 20 years' use

Miele carries out intensive endurance tests during the development phase in order to meet the highest quality standards. In these tests washer-dryers are in operation for a total of 19,000 hours (washing and drying). This involves running a mix of approximately 5,000 wash programmes. This corresponds to approx. 5 programmes per week continuous washing and drying with an average cycle time of 3.5 hours – over 20 years.

Thermospin

Before the drying cycle commences, the textiles are tumbled in a current of warm air while the spin speed is gradually increased. This results in the water content in the laundry being reduced before the actual drying cycle begins – this saves time and electricity.

TwinDos⁶⁾

Automatic dispensing with TwinDos is not only practical, but also guarantees perfect cleanliness: with UltraPhase 1 and 2 your appliance offers the best liquid dispensing system. TwinDos dispenses UltraPhase 1 and 2 at the optimum time during the programme and thus achieves the very best wash results. TwinDos also dispenses with such precision that you can save up to 30% on detergent when compared to manual dispensing.

Waterproof metal (WPM)

With the water level sensor and float switch, the WPM offers the highest level of protection against flooding and water damage. The inlet hose is metal-braided which protects against external damage. This space-saving water safety system is particularly practical for washer-dryers or top-loading machines which are often installed in confined spaces.

Wider range of languages

Your appliance can display information and tips in several languages to ensure that you understand everything. Simply select your language from the language menue. A flag directs you. This enables you to find your way around the interface - even if a language has been selected you do not understand.

Crease-free in next to no time – your convenient ironing partners!

A new era in laundry care Miele FashionMaster steam ironing system

Miele's FashionMaster – ironing partner offering many convenient features

With the perfect combination of hand iron, steam generator and ironing board the often unloved task of ironing turns into an uplifting and enjoyable activity.

The secret behind the FashionMaster is sophisticated technology. The motto during the development: perfect results with minimum effort. You will experience this right from the outset with the patented 1-2-Lift-System¹⁾. It assists to set the FashionMaster up with very little effort on your part. Then there is the extremely precise and efficient steam technology which ensures perfectly smoothed garments with ease. The hand iron with a special honeycomb soleplate guarantees excellent steam distribution which results in best smoothing results.

With the powerful Steamer you can apply the benefits of steam generation directly to hanging textiles. A display keeps you informed of the state of the appliance, e.g. when the water tank needs replenishing. The FashionMaster also stands out with its functional and attractive design. Even when folded it is almost too goodlooking to be hidden away. It is not surprising that this Miele innovation received awards from several acclaimed design juries.

Goodbye ironing stress. Hello FashionMaster!

Is ironing not one of your favourite pastimes? We can relate to that. It was for this reason we developed an ironing system to make ironing your textiles simpler, faster and more uniformly than ever before.

Ironing with the Miele FashionMaster makes this often unloved task seem far less daunting. Even preparation requires less time and effort: equipped with an ironing table, an iron and a steam generator, the FashionMaster has everything on board. On two floor-friendly rollers, it is as effortless to pull and move around in the home as a golf trolley. It even takes the odd step or two in its stride. The innovative technology of the FashionMaster helps you to deal with a mountain of laundry quickly and easily. From a delicate silk blouse to a robust linen jacket, from intricate sequined embroidery to printed clothes, the FashionMaster gets rid of creases in record time. Easy ironing without having to make any compromises.

Which convenience features would you like? Overview of the product highlights* of Miele's FashionMaster steam ironing system

Exklusiv
bei MieleHoneycomb soleplate1)The patented honeycomb drum already ensures outstanding gentle treatment of laundry in washing machines and tumble dryers. The same principle is also applied to the FashionMaster, making a noticeable difference compared to other systems. The unique honeycomb soleplate achieves best ironing results combined with perfect laundry care. Unlike conventional hand irons, the steam is distributed quickly and evenly along the channels between the hexagons across the entire soleplate. This creates a film of steam which allows the hand iron to glide effortlessly, but at the same time effectively, over your laundry.

Active ironing board

and hold the textiles in place.

Best ironing results: suction and inflation

functions ensure excellent steam application

More than just a puff of hot air: 4 bar steam pressure and a consistent steam output of

Steam

results.

1-2 Lift-System

bei Miele Two easy steps to set up, requiring little or no effort at all! Ready for use in next to no time thanks to the patented²⁾ 1-2-Lift-System.

Infinite height adjustment

Simply ergonomic: a pneumatic spring brings the ironing table to the perfect working height. (83 to 102 cm).

Steamer

Easy to handle: garments on coat hangers such as dresses and jackets as well as curtains are gently smoothed and brought back into shape.

* depending on model 1) Patent: EP 2 233 632 2) Patent: EP 2 169 108

Which additional convenience features would you like? Overview of the product benefits* of Miele's FashionMaster steam ironing system

Non-stick soleplate Perfect care: sequins, prints, delicate fabrics and dark items are all ironed without creating shiny patches.

Suction function Intensive and smooth: the suction function holds your laundry in place and enables more steam to penetrate the fabric for a perfectly smooth finish.

Inflation function Virtually weightless: a cushion of air allows the item to be smoothed but not pressed.

Ironing multi-layered items Saves time and effort: multi-layered items can be ironed in a single process. Ironing both sides of a garment is no longer necessary!

ComfortZone Ironing in a single process: the entire front half of a shirt or blouse can be ironed without having to re-position the garment.

Water container Long-lasting: the water container holds up to 1.25 I – sufficient for one full hour of ironing.

Storage compartments All-in-one: everything can be tidied away in storage compartments for iron and accessories.

Castors

Mobile and nimble: the FashionMaster can be transported effortlessly and follows you where ever you want it to go.

Display Always in view: the display keeps you informed about the appliance and prompts you, for example, when the water container needs refilling.

CoolDown function Extra safety: when the iron is not in use it switches off automatically after three minutes.

AutoOff function For peace of mind: when the iron or Steamer are not used for 15 minutes the entire appliance switches off.

Guided first-time use

Getting started made easy: when using the appliance for the first time, you are guided through the menu to set the language and water hardness.

Guided descaling Long life-cycle through ideal

descaling system: the appliance starts automatically at the touch of a button after the descaling agent has been added.

Automatic rinsing

Unadulterated ironing fun: thanks to the rinsing function, the mineral residue left behind by the evaporation process is removed.

Wide range of languages Your Miele appliance offers several languages: various languages can be selected via the interface.

What do the icons mean? All symbols for the FashionMaster at a glance

Charts on the following pages contain detailed information on Miele's FashionMaster. In general, Miele products have many different functions and characteristics.

Icons of the most important features directly above the product ensure differentiation at a glance. For a faster overview we are giving you a brief explanation of all used icons in this product group on this page.

Indicates if the appliance features

With the practical Steamer, hanging clothes, jackets, curtains, etc. are gently smoothed.

Useful details The glossary of Miele's FashionMaster steam ironing system

1-2 Lift-System

Two easy steps to set up, requiring little or no effort at all! With the patented²⁾ 1-2 Lift System, the entire appliance, consisting of a hand iron, ironing table and steam generator, can be set up in only two sweeping movements. Unlock and allow the ironing table to slide into a horizontal position until it engages - almost like magic. The FashionMaster not only irons laundry but also reduces back strain!

Active ironing board

The ironing table assists you actively with three intelligent functions. The inflation function ensures that items are ironed particularly gentle, the suction function a more intensive steam application. Pressing the steam button on the iron activates the suction or inflation function of the ironing table, and switches it automatically off when you decide to take a short break. The memory function saves the last selected setting and reactivates it when steam is required again.

Automatic rinsing

Mineral residue left behind by the evaporation process must be regularly removed by rinsing the steam generator to ensure consistent appliance performance. The FashionMaster calculates rinse intervals automatically based on the volume of water evaporated. The rinsing process will then commence automatically immediately after switching the appliance on. The only matter to take care of is to empty the residual water container.

AutoOff function

When the iron or Steamer is not used for approx. 15 minutes, the entire appliance switches off automatically. No need to worry if you have forgotten to switch the iron off.

Castors

Mobile and nimble: the FashionMaster stands firmly without requiring additional support even when folded together, and can be positioned anywhere in your home. With its floor-friendly rollers, the appliance can be moved effortlessly wherever you need it. Thresholds, carpet edges and even single steps do not pose a problem.

ComfortZone

With a 120 x 40 cm large ironing table, there is sufficient space for even entire trouser legs. The ComfortZone at the narrow end of the ironing table is designed for you to iron the entire front of a blouse or shirt in a single process without having to re-position the shoulder area. A great time-saving feature.

CoolDown function

SAFETY is always high on the agenda at Miele: consequently, movement sensors and monitoring of controls ensure that the hand iron switches off automatically after it has not been used for approximately 3 minutes. As soon as a movement is detected, the appliance switches on again.

Display

The display enables you to keep track of appliance settings. It also informs you sufficiently early and reliably if, for example, descaling is required or the water tank needs replenishing.

Guided descaling

After you have keyed in the water hardness before using the appliance, the programme automatically determins the required descaling cycle and displays a timely reminder. You start the descaling programme simply by pressing a button. The appliance will prompt you to add a descaling tablet, and then start the programme automatically.

Guided first-time use

Before using the FashionMaster for the first time, the programme guides you through the most important settings. You simply select in which language you would like information to be displayed, and key in the water hardness. The appliance automatically calculates the right descaling cycle. This ensures that your FashionMaster is maintained and works for a long time.

Honeycomb soleplate1)

The honeycomb structure has already proved effective on Miele honeycomb drums and now also makes a difference on Miele's FashionMaster. Unlike conventional irons, with the patented honeycomb soleplate steam is distributed in next to no time along a network of narrow channels across the entire soleplate. This allows the iron to glide effortlessly and gently over textiles, at the same time ensuring perfect ironing results.

Infinite height adjustment

With convenient and infinite height adjustment, you can set the ironing table exactly to your individual working height. Supported by a built-in gas pressure stay, the ironing table can be conveniently adjusted to a working height of between 83 and 102 cm.

Inflation function

For everything that is to be smoothed but not pressed, the FashionMaster ironing board offers a inflation function. The fan creates an air cushion between the item being ironed and the table. Perfect for ironing frills, cashmere pullovers, etc. The same function prevents seam and hem impressions.

Ironing multi-layered items

Save physical effort and time. With the FashionMaster, multi-layered and dense textiles now only require to be ironed on one side, not on both. The large quantity of steam and high steam pressure applied can penetrate even thick, dense material such as denims. This makes ironing on both sides superfluous.

Non-stick soleplate

Sequin, prints, etc. or extremely delicate fabrics – with Miele's FashionMaster you can handle any type of challenge. The clip-on non-stick soleplate for extra gentle treatment is also suitable for items with fashionable adornment. Its Teflon finish prevents shiny patches on dark textiles without having to turn them inside out.

Steam

With up to 4 bar steam pressure and a consistent output of 100 g/ min you can achieve professional ironing results with the FashionMaster. The dry steam penetrates even very thick, dense material and reduces ironing time. Steam pulses or continuous steam delivery - you can select the most suitable option using the steam button on the hand iron.

Steamer

Unsightly creases in your jacket, evening dress or curtains are child's play for the FashionMaster's Steamer. It only weighs half as much as the hand iron but uses the same steam pressure and steam output. The brush attachment raises the pile on fabrics and ensures that safe distances are kept to garments. The Steamer can also be used when the FashionMaster is folded away.

Storage compartments

When the FashionMaster is folded, you do not see cables, the iron, etc. What you see is its strikingly elegant design.

Two accessory compartments ensure this: the iron and the cable holders are stored under the iron rest. The second compartment is in the appliance base. Here the supply lead, non-stick soleplate, Steamer and other accessories are stored away securely.

Suction function

The suction function built into the ironing table ensures precise steam penetration of garments and reduces the build-up of condensation. Another benefit is that items on the ironing table are automatically held securely in place during ironing.

Water container

The water tank requires refilling during the processing of large quantities of laundry. This is easily done as the water tank of the FashionMaster can be refilled with tap water at any time during the ironing process. The user-friendly design of the water tank allows refilling even under low taps. 1.25 I capacity allows you to iron for approximately one hour non-stop.

Wider range of languages

Your appliance can display information and tips in several languages to ensure that you understand everything. Simply select your language from the language menue. A flag directs you. This enables you to find your way around the interface - even if a language has been selected you do not understand.

Which convenience features would you like? Overview of the product highlights* of Miele rotary ironers

Miele rotary ironers – the champions against creases and wrinkles

Do you think that rotary ironers are old fashioned and inconvenient? If this is the case, then you have never worked with a rotary ironer from Miele. It will not take long for the benefits to convince you otherwise. Ironing has never been faster or more convenient! Compared to conventional ironing methods, you can save considerable effort and reduce ironing time by up to 50%. This allows you to gain time for the nicer things in life!

Fascinatingly versatile

Flexible to meet all requirements: any type and size of laundry can be smoothed quickly and easily.

Exklusiv
bei MieleSteam functionGlides particularly smoothly:

twin-tank technology for fast and even steam distribution and excellent ironing

E S

High contact pressure

results.

More pressure, better removal of creases: you would have to press down on the ironing table with a force of about 7 kg to create a comparable pressure with a hand iron.

Temperature selection to suit textiles

Gentle treatment of fibres: simply select the temperature in accordance with the care label of the textile. This ensures that your textiles stay looking good for longer.

Ironing in a seated position

Ergonomic and strain reducing: the strain on your back is reduced, and operation using foot switches leaves both hands free.

Which additional convenience features would you like? Overview of further product benefits* of Miele rotary ironers

83 cm roller length

Convenient and time-saving: fast ironing of large laundry items such as pillow cases in only one single process.

Variable roller speed Ironing made simpler: the type of laundry, the residual moisture and your own work pace are taken into consideration.

Free, unsupported roller end No jams, no tangling: even difficult-to-iron laundry items such as skirts or shirts are easy to iron.

Ample stacking space Spacious: your ironed laundry items land gently on the table - without creasing.

Convenient airing bar Saves space and time: simply place items over the bar after ironing. Ideal for cooling down and airing until dry.

Exklusiv
bei MieleEmergency releasePerfect protection for your laundry: release the contact pressure of the roller manually and simply remove your laundry.

Stability

Secure stand guaranteed: a robust construction and a supporting foot ensure a secure stand.

Space-saving storage

Fits in the smallest niche: the appliance requires only 0.2 m² of storage space. It has four castors for ease of transportation.

What do the icons mean? All symbols for rotary ironers at a glance

Charts on the following pages contain detailed information on Miele's ironing appliances. In general, Miele products have many different functions and characteristics.

Icons of the most important features directly above the product ensure differentiation at a glance. For a faster overview we are giving you a brief explanation of all used icons in this product group on this page.

Fabric

Indicates for which textiles the appliance is particularly suited.

Flatwork: this appliance is particularly suited to iron flatwork such as bed and table linen, etc.

Indicates if the appliances features a steam function.

Glides particularly smoothly: twin-tank technology for fast and even steam distribution and excellent ironing results.

Useful details The glossary of Miele rotary ironers

83 cm roller length

Compared with a conventional hand iron, the area for ironing is five times as large. The roller width of 83 cm allows for extremely convenient ironing of large laundry items. A pillow case, for example, can be ironed in one single process.

Ample stacking space

After ironing, laundry items drop gently and loosely onto the large laundry table, crease-free.

Automatic finger guard

Should your fingers get underneath the hinged finger guard, the safety switch will react immediately and switch the motor off. This ensures that your fingers are protected. This ensures that your fingers are protected.

Convenient airing bar

The swing-out airing bar serves for hanging ironed items to prevent creases. On the bar, items can cool down and dry completely.

Emergency release

If there is a power cut during ironing, the heater plate does not retract automatically when you release the foot control bar. In this case, you can release the pressure from the heater plate manually by pressing the emergency release lever. The laundry item can now be pulled out in the direction of the roller movement. This ensures that your textiles are not damaged.

Fascinatingly versatile

For many different types of textiles and laundry items, Miele offers a convenient solution to smooth them quickly and effortlessly. This makes trips to a laundry superfluous. Not only bedding and table linen are ironed with ease, but T-shirts, denims, etc. too. See for yourself how versatile and easy it is to operate.

Free, unsupported roller end

The free, unsupported roller end simplifies the ironing of difficult and fiddly laundry items such as shirts and skirts.

High contact pressure

During ironing, the heater plate presses down on the roller with a force of 0.35N/cm². You would have to press down on the ironing table with a weight of about 7 kg to recreate a comparable pressure with a hand iron. Achieving excellent ironing results with little effort.

Ironing in a seated position

Effortless ironing whilst sitting down. The roller is set into motion using a light-touch foot switch, and the heater plate lowers onto the fabric and applies contact pressure. The ergonomic working position reduces the strain on your back and leaves both hands free.

Space-saving storage

After ironing has finished, a convenient fold-away mechanism allows space-saving storage. Folded together, the rotary ironer only requires 0.2 m² of floor space. Thanks to four stable castors, the rotary ironer is easy to move around.

Stability

The robust design and a stable base ensure a high degree of stability.

Steam function

This function allows ironing with steam. The twin-tank technology ensures fast steam generation, uniform steam distribution across the entire ironing area and up to 40 minutes of ironing with steam (using one tank of water). An LED indicates in good time when tanks require refilling. Uses tap water. 0.84 I tank capacity.

Temperature selection to suit textiles

To protect the fabric, the temperature can be adjusted in accordance with the care label. Three heater elements then distribute the heat perfectly evenly across the entire roller. This guarantees excellent ironing results.

Variable roller speed

The roller speed can be adapted in five settings to the respective requirements. Adjustment to type of laundry and moisture content. Setting the individual work speed.

Practical accessories for your laundry-care appliances and exclusive detergents for your laundry.

Washer and dryer stack

If there is not sufficient space available to install two appliances next to one another, most Miele washing machines and tumble dryers can be conveniently combined as a washer-dryer stack. In this arrangement, the washing machine is always installed under the tumble dryer.

Miele offers various stacking kits for a stable connection between the two appliances. Some, e.g. the WTV 512 model, feature a practical drawer. This drawer is ideal for storing accessories for example or for conveniently resting the laundry basket on whilst loading and unloading the tumble dryer.

Plinth with drawer

For ergonomic purposes, washing machines and tumble dryers can be installed on plinths specifically designed for them – e.g. WTS 510. A plinth height of 30 and 35 cm allows you to load and unload your textiles without having to stoop. For a secure installation the appliances are fixed onto the plinths. The integrated drawer with Push/Pull opening mechanism offers additional storage space for detergents, fragrance flacons, and more. Thanks to an anti-slip mat these items cannot slide around when opening or closing the drawer.

- UltraWhite, the multi-purpose detergent. • For all coloureds and black garments:
- UltraColor colour-care detergent. • For wool, silks and delicates:
- WoolCare for delicates.

Ultra

Phase 2

Caps

Collection

Miele offers simple and compact solutions for special or high-quality loads which are only washed infrequently, such as downfilled items or textiles with breathable membranes. For thorough cleaning and gentle treatment of challenging fibres.

For Miele washing machines with automatic dispensing Miele also offers specific solutions: Miele UltraPhase 1 and Miele UltraPhase 2, a unique 2-component detergent system in cartridges for whites and coloureds.

Optimum interaction of detergent and washing machine: perfectly cleaned laundry using minimum quantities of detergent.

The products are specifically formulated for Miele washing machines and stand for perfect wash results.

Based on the water quantity and the temperatures required for Miele wash and care programmes, the most efficient dispensing recommendations for achieving perfect results have been determined and successfully tested.

This allows you to tap the potential of your Miele machines to the full using incredibly low quantities of detergents. This also protects the environment.

UltraWhite multi-purpose detergent for spotlessly white laundry.

UltraColor colour-care detergent for brilliant colours and protection against colours running.

Sensitive WoolCare detergent for the gentle cleaning of delicate textiles.

UltraPhase 1 and UltraPhase 2

For washing machines and washer-dryers with TwinDos

UltraPhase 1 and 2:

Best liquid detergent system on the market. With TwinDos automatic dispensing at the touch of a button for perfect wash results.

- Dosing accuracy

Competence in Textiles · Worldwide

The endorsed properties for the automatic 2-phase dosing system using Miele UltraPhase 1 and UltraPhase 2 detergents were compared with branded liquid detergents at different temperatures.

At 40°C the stain removal was tested against a colour care detergent, and at 60°C the stain removal, degree of whiteness and anti-greying properties were tested against a heavy-duty detergent.

The dosing accuracy was confirmed regardless of the washing temperature.

www.hohenstein.com

Tried and tested quality

The German Hohenstein test institute tested the automatic 2-Phase dispensing system in connection with Miele's UltraPhase 1 and UltraPhase 2 detergents. They confirmed excellent wash results in terms of stain removal, the degree of whiteness, the anti-greying effect and accuracy of dispensing.

Miele fragrance flacons for Miele tumble dryers For a fresh and long-lasting fragrance – fully automatically

Feel-good freshness after tumble drying With your Miele tumble dryer you can now enjoy the superb convenience of a longlasting and well-balanced fragrance. Miele's fragrances add your personal favourite scent to your laundry during the drying process.

As a result, you get not only especially bouncy laundry, but also laundry that smells great – for up to four weeks.

Choose your very own personal favourite from 5 fragrances.

Fragrance flacon 12.5 ml

For 50 drying cycles

- For fresh, fragrant laundry that lasts for up to four weeks
- · For bouncy as well as beautifully fragrant laundry
- Developed 'en Provence' by perfume specialists specifically for Miele
- AQUA pure and thorough cleanliness with a fresh scent, Mat. no. 10231860

COCOON - for a feeling of peace and harmony, Mat. no. 10234560

NATURE - floral aroma and natural, well-balanced fragrance, Mat. no. 10234440

ORIENT - brings together the secrets of the Orient in a tempting fragrance, M.-Nr. 10234670

ROSE – discover the subtle perfume of freshly cut May roses, M.-Nr. 10234730

Fragrance to suit your individual taste – lasting for weeks

and completely automatically¹⁾

The fragrance flacon is simply fitted into a holder on the easily accessible fluff filter and distributes an unobtrusive fragrance evenly onto your laundry. The intensity of the fragrance can be adjusted by turning the flacon.

For the ultimate freshness experience in every drying cycle!

Miele in-house service

Your partner for prompt servicing

When you buy a Miele appliance you choose longevity and the best in quality. If, however, you require any help, our local partners and their service teams can provide rapid and reliable assistance.

The quality of the service level of our partners technicians is regularly checked by Miele Headquarters and updated by relular service training classes taking place at Miele Headquarters in Germany.

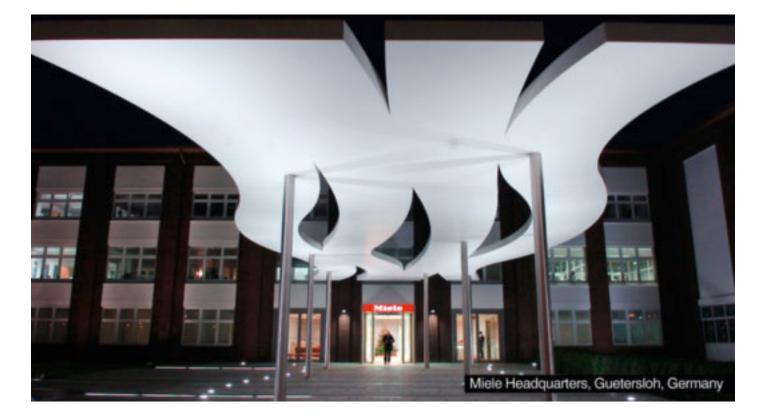

Miele defines perfect service as more than simply providing expert service in the event of technical problems. The service teams of our worldwide partners provide support right through from installing the machine to any matters concerning the use of appliances. They can provide professional maintenance checks of your appliances or use a diagnostic system, especially designed by Miele, to check your appliances in case of errors or to make sure they are kept up-to-date. During installation the service teams can also already provide you with some valuable advice on how Miele appliances or on how to clean them thoroughly by using our cleaning products.

Further information on these topics is available from our website. (www.miele. com).
